

## Artiva® Agency

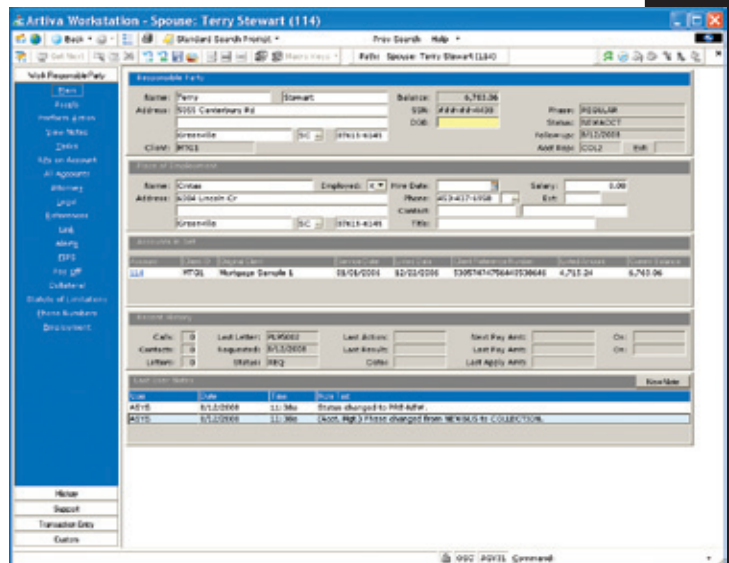

The Artiva Agency system is designed specifically to meet the challenging needs of the third-party marketplace.

In the '90s credit grantors placed accounts with third-party agencies based on relationships and historical performance. While relationships are important today, much of that loyalty has eroded. Credit grantors are looking only to agencies that perform and adhere to their compliance standards. Agency audits are common, and agencies that fail to perform or comply will be replaced. Ensuring account representatives perform optimally while meeting your clients' work standards is vital to retaining clients and protecting your company's bottom line.

The Artiva Agency system provides the ability to strategically manage your receivables. This enables you to operate more effectively in today's competitive business climate:

- The system enables you to implement business rules to ensure accounts receive the proper collection and placement strategy and can be determined by any criteria management desires. Managers have increased control with user-defined reports, queuing options and real-time graphical displays.
- The system provides powerful collection tools that will improve efficiency, allowing you to spend more time focusing on your business.
- The system's account flow options allow you to determine how account representatives work

accounts based on your experience, client mandates and industry best practices.

The Artiva Agency system can help you attain higher recovery rates, identify and work your most collectible accounts and reduce the cost of collecting each account.

Providing you with the tools you need to perform as efficiently and effectively as possible, the Artiva Agency system allows you to make strategic business decisions with confidence.
